Novel BASB019 polynucleotides and polypeptides from Moraxella catarrhalis used to prepare vaccines against bacterial infections

 $\begin{smallmatrix} \forall \times & \circ \\ v \times & \circ \\ v \times & \circ & \circ & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ & \circ & \circ \\ v \times & \circ & \circ \\ v$ Claim 10; Fig 2; 101pp; English.

CC screening of genetic mutations, serotype, organism or strain components of aircays which are useful for diagnostic and prognostic components of arrays which are useful for diagnostic and prognostic cumponents of arrays which are useful for diagnostic and prognostic cumponents of arrays which are useful for diagnostic and prognostic cumponents of arrays which are useful for diagnostic and prognostic cumponents of the screening of antimicrobial drugs. The polypeptides can components of the screening of antimicrobial drugs. The polypeptides can components and componists and componists and componists and componists and componists. The polypeptides, another and prevention of componists and componists and componists and componists and componists and componists. The polypeptides, and to identify agonists and considered prognosists and componists and componists and componists. The polypeptides are used for the treatment and prevention of componists and componists and componists and componists and componists. The polypeptides are used for the calcally damage, delayed speech componists of the upper respiratory tract and middle ear componists of the prevention of adhesion of bacteria componists of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The implantation that for new antibacterial compounds that may target these can be used screen for new antibacterial compounds that may target these This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynicleotides may be used as a source for hybridisation probes, and for resistant bacteria.

                                                                                                                                                                                                                                                                                                                         The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF2854). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 369-391; 545pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging of disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and for screening of genetic mutations, scrotype, organism or strain identification identification of mutation in BASB013 sequences, and as components of arrays which are useful for diagnostic and prognostic purposes. The polypeptides can be used to produce antibodies, and as a

cc identification, identification of mutation in BASBO13 sequences, and as components of arrays which are useful for diagnostic and prognostic cc components of arrays which are useful for diagnostic and prognostic cc target for the screening of antimicrobial drugs. The polypeptides can cc target for the screening of antimicrobial drugs. The polypeptides can cc also be used in vaccine formulations, and to identify agonists and cc antagonists. The polypeptides, antibodies, agonists and antagonists cc (which are bacteristatic) are used for the treatment and prevention of cd diseases including bacterial infection, otilis media in infants and confidence of the prognession of the upper respiratory tract and middle ear cacumulation in the middle ear, auditive nerve damage, delayed speech cacumulation. They are also used in the prevention of adhesion of bacteria confections on wounds, and to thus prevent tissue damage and/or block the implantation of in-dwelling devices or by other surgical techniques. The implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are created for new artifications. The BASBO19 products of the invention of the common to isolate M. catarrhalis strains that are invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for dispnosis of disease, staying disease, or determining response of an infectious organism to drugs. The polynncleotides may be used as a source for hybridisation probes, and it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel BASB019 polynucleotides and polypeptides from Moraxella catarrhalis used to prepare vaccines against bacterial infections

Comprehensive of artisty which are used to produce antibodies, and as a C target for the screening of antimicrobial drugs. The polypeptides can calso be used in vaccine formulations, and to identify agonists and calso be used in vaccine formulations, and to identify agonists and calso be used in vaccine formulations, and to identify agonists and calso for the polypeptides can consist and antagonists. The polypeptides, agonists and antagonists and contagonists. The polypeptides, activations, other media in infants and consist and are bacteristatic) are used for the treatment and prevention of consists in the elderly, sinusitis, media in infants and consists endiated in infections and consists and activate diseases, chronic otitis media with hearing loss, fluid carcumulation in the middle ear, auditive nerve damage, delayed speech carcing, infections of the upper respiratory tract and middle ear confection. They are also used in the prevention of adhesion of bacteria confections on wounds, and to thus prevent tissue damage and/or block the proteins on wounds, and to thus prevent tissue damage and/or block the confinal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or by other surgical techniques. The frequency of Moraxella catarrhalis infections has risen dramatically, and it is no longer common to isolate M. catarrhalis strains that are cresistant to standard antiblotics. The BASBO19 products of the invention consistant bacteria. screening of genetic mutations, serotype, organism or strain identification, identification of mutation in BASB013 sequences, and as components of arrays which are useful for diagnostic and prognostic This sequence encodes a Moraxella catarrhalis BASB019 protein of the invention. The sequences can be used for diagnosis of disease, staging disease, or determining response of an infectious organism to drugs. The polynucleotides may be used as a source for hybridisation probes, and resistant bacteria. of L... , staging or The

A suspect sample is contacted with the MAb in the presence of an indicator such as radiolabelled probe.

The OMP can also be used in the development of vaccines against H. influenzas which causes pneumonia, bacteraemia, meningitis, postpartum sepsis and acute febrile tracheobronchitis in adults and neonatal sepsis ancacute ofitis media in infants and children.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the complete genome sequence of the bacterium Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify commercially important nucleic acid fragments and expression modulating fragments (RMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Haemophilus influenzae Rd genome medium - useful for identifying

CC This sequence encodes a H. pylori outer membrane protein.
CC The protein may be used in a vaccine to prevent or treat H. pylori
CC infection or to identify H. pylori polypeptide binding compounds,
CC useful as potential H. pylori life cycle activators or inhibitors.
CC The genomic sequence of H. pylori (ATCC 55679) was determined from
CC overlapping contigs generated by mechanically shearing the bacterial
CC DNA. The sequences were analysed for ORF of at least 180 nucleotides,
CC and the predicted coding regions defined by computer evaluation. To
CC identify likely H. pylori antigens for vaccine development, the amino
CC acid sequences predicted from various ORF were analysed for significant
CC homology to other known or exported membrane proteins. Having identified
CC and determined the sequences of interest, particular regions can be
CC isolated from H. pylori by PCR amplification for recombinant polypeptide
CC isolated from H. pylori by pCR amplification for recombinant polypeptide
CC Note: This DNA sequence is not reproduced in the specification and
CC has been derived from the related specification, w09719098.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Вþ

cc are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid cc sequence. The nucleic acid sequences, and corresponding proteins, are calso useful for generating vaccines for immunising subjects against H. cc pylori or for use in detecting the presence of Helicobacter species in cc a sample. Antisense nucleic acid sequences of these sequences are cc used to inhibit expression of a gene from Helicobacter species. H. cc pylori whole genomic DNA was isolated and nebulised to a median size of cpylori whole genomic DNA was isolated and nebulised to a median size of complementary to the BstXI-cut pMPX vectors, while the overhang is not cc complementary. Therefore the linkers will not concatemerise nor cc will the cut vector re-ligate itself easily. The linker-adapter inserts cc were ligated to each of the 20 pMPX vectors to construct a series of cc senienced. The ORF/protein reference number for this sequence was obtained the related specification, W09640893.

This invention describes a novel preparation of an agent (A) for CC detection, prevention and/or treatment of microbial infection by: (i) identifying essential genes (I) and corresponding polypeptides (II); (ii) identifying compounds that are directed against (II) and CC inactivate the microbe; (iii) testing these for suitability for use; and CC (iv) formulating selected (A). Identifying essential genes (I) comprises (II) formulating selected (A). Identifying essential genes (I) comprises (In) hittion (CAI) and/or subtractive recombination mutagenesis (SRM), CC preparation of gene-deficient microorganisms by conditional antisense (CC proparation) in the deficient microorganisms. (CC polypeptide (IIa), vector or host cell containing (Ia), derived (CC polypeptide (IIa), or fragments, (IIa) reparticularly used for diagnosis, (CC treatment or prevention of infection by Helicobacter pylori. Particularly (CC (IA)) and (IIa) are used in DNA, subunit or live vaccines. The method (CC identifies essential genes, including those that have homology in other (CC gene-deficient cells can be screened quickly, in an automated process, and the infection of the companion of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
